

# Help! How do I switch my projector display mode?

There is a keyboard shortcut to make it quick and easy to switch between Projector Clone or Dual-Screen Mode. Just press the **Windows key and P**. The dialog in the image below will show up. You can then choose the option that you would like. The most common option is Duplicate, which shows your computer screen on your projector. The other option is Extend, which will separate your computer screen from your projector.

Disconnects projector, also enabled if no projector is present.

Shows the same thing on your projector as your LCD monitor.

Separates your projector display from your computer monitor.

Disconnects your monitor. Only displays your screen on the projector.
